

# Let's Get Physical

Breaking Home Security Systems and Bypassing Buildings Controls

31 July 2013 – Black Hat USA 2013 – Las Vegas, NV

Presented by:  
Drew Porter &  
Stephen Smith  
Bishop Fox

# Agenda

## OVERVIEW

- Demo
- Quick Overview
- Sensors
  - Door and window
  - Motion
- Keypads
  - Land line
  - Cellular
- Fixes
- Summary

# Demo Time

LESS TALKING MORE DOING

# Quick Overview

BACKGROUND

# What We Really Focus on

## PARTS TO TARGET

- Door and window sensors
- Motion detectors
- Keypads

# Security Systems

## THE BASICS

- 2 functions
  - Deter intruders
  - Alert
- 3 parts
  - Door and window sensors
  - Motion Detector
  - Keypad

# Quick Facts

## PHYSICAL SECURITY

- 5 – 20 year lifecycle
- Security items are broken
  - No one wants to hear about it
- Systems built to be cheap
  - Leads to higher tolerance devices
    - Easier to bypass
- Physical assessments are more common
  - Not just getting past locks anymore

# Basic Office Setup

LAY OF THE LAND

# Sensors

HOW THEY WORK

# Door & Window

## THE FACTS

- Most Basic Sensor
- Few Types
  - Wire or wireless
  - Magnetic and ball
- Same Basic Principle
  - Break the circuit = trip the alarm

# Door & Window

DEFEATING THE SENSORS

# Motion

## THE FACTS

- Ultrasonic
- Microwave
- Tomographic
- Passive infrared
  - Most common

# Motion Continued

## THE FACTS

### Dual tech

- Microwave + passive infrared
  - Most common
- Both tech have to trip to open the circuit
- Mostly in office buildings
  - Can be used to get past another physical control mechanism (i.e.: RFID)

# Motion

DEFEATING THE SENSORS

# Keypads

HOW THEY WORK

# Keypads

## THE FACTS

- The “brains” of the alarm system
- Reports to you or monitoring center
- Many different data connections
  - Landline
  - Broadband
  - Cellular
- Holy grail to pwn

# Defeating Keypads

LANDLINES AND CELLULAR

# Now What?

SOME SUGGESTIONS

# A Few Fixes

CAN'T SOLVE EVERYTHING

## Door and Window

- Sadly, kind of screwed on this one

## Motion

- Location, location, location!
- Better sensors

## Keypad

- Use dual tech for reporting
- Reporter service using secure protocols
- Verify all security features

# Backup Plan

...JUST IN CASE

# Key Highlights

IF YOU ONLY REMEMBER TWO THINGS

1. Many systems are **vulnerable** and easy to break
2. More **awareness** is needed

# Thank You
