# JUNIOR SYSTEM ADMINISTRATOR

Bishop Fox is a leading security consulting firm serving the Fortune 1000 and high-tech startups. We protect our clients by finding vulnerabilities and building defenses before the attackers can break bad. From critical infrastructure to credit cards; social media to mobile games; flight navigation systems to frozen waffle factories — we're right there hacking away.

We're searching for a junior system administrator to join our growing team.

## Who You Are and What You'll Do

You've always loved technology. As a kid, you could be found building computers in your parents' garage. People usually come to you when their gadgets act up, and you can usually explain the problem to them in 60 seconds. It's more than a skillset for you, though – it's a passion.

Your knowledge and skills encompass the IT spectrum, from hardware to software and from open-source to commercial software. You're always motivated to learn about the latest trends in technology and help out where you can. Trustworthiness, attention to detail, and an inquisitive mind are three of your finest features. You work to tame the beast of modern technology.

At Bishop Fox, you'll be the go-to for keeping the company's IT infrastructure in working order. You will be a hero to many of your co-workers. A day for you could require dabbling in several areas, such as: providing support to team members, supplying and managing assets, and assisting with expanding and improving our infrastructure.

## Why Bishop Fox

Bishop Fox offers competitive salary, generous benefits, flexible schedules, and negotiable travel. If you're looking for opportunities to grow professionally, this is the place. You'll work alongside some of the most talented and experienced security consultants in the industry.

We have a casual workplace environment, but we're consummate professionals.

# Your Experience

The following is a list of skills you will have in your repertoire. If you have most of these, we'd like to speak to you.

- Previous work in a IT/tech support/customer service capacity
- Aptitude for solving IT problems (hardware or software)
- Exceptional communication skills
- Comfort operating Windows, Mac, and Linux systems
- Information security experience or interest
- Server administration experience
- Working knowledge of networking: TCP/IP, DNS, VPNs, etc.
- A certification is nice, but not a necessity.

Candidates must be located in the Phoenix area.
